

FINAL EXAMINATION

COURSE : FUNDAMENTALS OF FINANCIAL MANAGEMENT

COURSE CODE : PFN2143

DURATION : 2 HOURS

INSTRUCTIONS TO CANDIDATES:

1. This question paper consists of **THREE (3)** questions.
2. Answer ALL questions in the Answer Booklet provided.
3. Please check to make sure that this examination pack consists of:
 - i. The Question Paper
 - ii. An Answer Booklet
 - iii. Appendix 1 - PVIF and PVIFA tables
 - iv. Appendix 2 - The formula list
4. Do not bring any material into the examination hall unless the invigilator gives permission.
5. Please write your answer using a ballpoint pen.

DO NOT OPEN THIS QUESTION PAPER UNTIL YOU ARE TOLD TO DO SO

The question paper consists of 04 printed pages

SHORT ANSWER**1. (25 points)**

- a. Syed Mukhtar Sdn Bhd recently purchased a new machine for its factory operations at RM300,000. The investment will generate RM50,000 in annual cash flows for 7 years. Compute the internal rate of return (IRR) for this investment. (5 points)
- b. Sunshine Construction Limited is planning to venture into a new project and is assessing the capability and profitability of two mutually exclusive projects. The after-tax cash flow for both systems is provided below. The rate of return is 10%.

Year	Project A (RM)	Project B (RM)
Initial Outlay	580,000	600,000
1	100,000	200,000
2	150,000	200,000
3	200,000	200,000
4	230,000	200,000
5	270,000	200,000

Table 1

Required:

- i. Calculate the payback period for both projects. (3 points)
- ii. Calculate the Net Present Value (NPV) for both projects. (8 points)
- iii. Calculate the profitability index for both projects. (2 points)
- iv. Calculate the internal rate of return (IRR) for **Project B**. (5 points)
- v. Which project should Sunshine Construction Limited choose and why? (2 points)

2. (25 points)

- a. Prestige Berhad plans to issue 7% irredeemable bonds at a discount of 4% with a par value of RM1,000. The floatation cost of the new bonds will be 5% of the market value. If the corporate rate is 24%, calculate the after-tax cost of debt of the bond. (5 points)
- b. Mentari Jingga Berhad is considering opening a new branch in the southern region. The capital structure of the company extracted from the latest audited Statement of Financial Position are as follows:

Source of financing	Weighted capital structure
Bond	27%
Preferred shares	18%
Equity	55%

BOND	
9% coupon rate, 12-year bond with a par value of RM1,000	
Current market price	RM975
Other costs	8% from the current market price
Corporate tax	24%
PREFERRED SHARES	
12% preferred shares with a par value of RM100	
Current market price	RM80
Other costs	5% from par value
EQUITY	
Current market price	RM44
Growth rate	6%
Past year dividend paid	RM2.30
Floatation cost	RM23

Table 2

Required:

- Calculate the cost of the:
 - Debt after tax (KdAT). (5 points)
 - Preferred shares (Kp). (2 points)
 - Retained earnings (Ke). (2 points)
 - Ordinary shares (Kne). (2 points)
- Calculate the weighted average cost of capital (WACC) if the company uses external common stock. (4.5 points)
- Calculate the weighted average cost of capital (WACC) if the company uses internal common stock. (4.5 points)

3. (10 points)

Citi Jaya Sdn Bhd announced a dividend of RM2 per share. The announcement was made through a press release and communicated to shareholders via email and the company's website.

- a. Explain **TWO (2)** factors that influenced the dividends policy for Citi Jaya Sdn Bhd to declare their dividend. (4 points)
- b. Explain **THREE (3)** types of dividends Citi Jaya Sdn Bhd can pay to their shareholders. (6 points)

END OF QUESTION PAPER

Present value interest factor of \$1 per period at i% for n periods, PVIF(i,n).

APPENDIX 1 (2)
PFN2143

FORMULA LIST

$P_p = \text{Initial Outlay} / \text{Constant annual cash flow}$

$P_p = \text{Year before recovery} + [\frac{\text{Unrecovered cost at beginning of year}}{\text{Cash flow during that year}}]$

$NPV = \text{Total PV} - \text{Initial Outlay}$

$IRR = a\% + [(x - y) / (x - z)] \times (b\% - a\%)$

$PI = 1 + (NPV / \text{Initial Outlay})$

$$K_d = CP + \frac{(Par - (CMP - \text{Other Costs}))}{(Par + (CMP - \text{Other Costs}))}^n$$

$K_{dat} = K_d (1 - T)$

$K_{ps} = D / CMP - \text{Other Costs}$

$K_e = D_1 / CMP + g$

$K_{ne} = D_1 / (CMP - \text{Other Costs}) + g$

$WACC = (K_d (1 - T) \times W_d) + (K_e \times W_e) + (K_{ps} \times W_{ps})$

APPENDIX 2
